Dear Hiring Manager  
4510-81 Bay Street  
Toronto, Ontario

January 1, 2026

Dear Hiring Manager,

Data is all around us and constantly using in various application such as in business, algorithms, finance, physics. Data drive me to look at the patterns and relation between sequence and series, and matrices. I am a first-year student at the University of Toronto studying computer science with the inspiration of creating application to analyze databases, ETL pipelines and machine learning systems. I am excited to work on challenging problems that test my ability with data-driven decision making through timely data and advanced analytics. My collaboration skills, accompanied by my proficient skills in python will enable me to succeed at Birch Hill Equity Partners.

One major project I create in python was a user interface system which stores the user input in the program. This program was a chat storage system where information regarding a user can be stored in a multi-layered dictionary, structured to represent the different aspects of the chat storage system. I created a program which can analyze text from a file and store it in the appropriate section of the storage system. I created a program that also takes users inputs and adjust and stores the corresponding information provided by the user in the program. Furthermore, I created a visualizer that displayed the information in the stored in the program while also implementing a test-case program which tested my program with different edge cases to ensure my program passed all test cases. My coding skills in python align with the technical skills required for the data scientist position.

As an Accounting assistant I assisted in tasks such as bookkeeping and client communication, which has given me an understanding of several types of taxes like GST, PST, EI, HST and payroll taxes. Furthermore, I assisted with balance sheets, income statements, trial balance, journal entries. One major task I was assigned with during my volunteering with DG Accounting inc. I had to follow the whole cycle of the accounting cycle and do the entire process on the entries given by clients. My financial skills align with the relevant work experience required with this job.

Through the City Of Surrey, I have been able to inspire those around me to get involved in the activities I lead. I have also taken on leadership roles in organizing activities such as the Crafts Zone and the Photo Booth at events like Canada Day and Fusion Festival. During my time at Day Camps, I had the opportunity to organize and facilitate activities. I have been able to inspire those around me to get involved in the activities I lead. Through my volunteering with the city of Surrey and the TLC, I am proficient in my collaboration skills, oral and written communication, and presentation skills. In addition, I have been able to implement my ideas and plans while functioning in a flexible, constantly changing environment.

I believe that my communication skills with people along with my strong skills in Python make me an excellent candidate for this position. Thank you for considering my application and taking the time to learn more about me and the potential asset I can be on your team.

Sincerely,  
Victor Gupta
